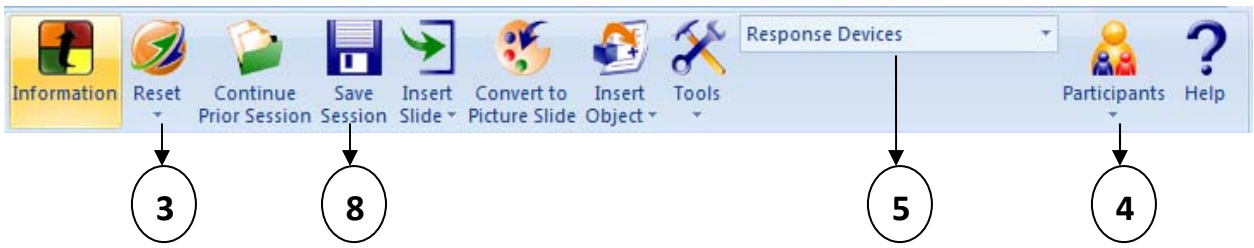
Clickers: Running a PowerPoint Presentation with Interactive Slides

After creating interactive slides using the TurningPoint software, you can run the presentation for students to "click" in their responses.



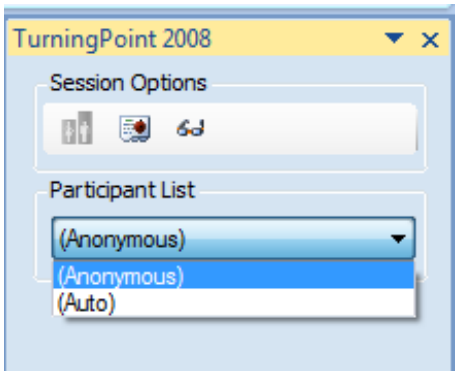
1. Plug in the receiver in the USB port.

2. Open TurningPoint 2008 (there is a shortcut on the desktop in all smart classrooms) Open your presentation.

***IMPORTANT:* If you open PowerPoint, your TurningPoint interactive slides will not work!!! Make sure you open the TurningPoint software!!**

3. On the TurningPoint ribbon, select the **Reset** button. This will ensure that any data from a previous session has been properly cleared.

4. From the TurningPoint 2008 task pane identify the **Participant List** using the pull-down menu.



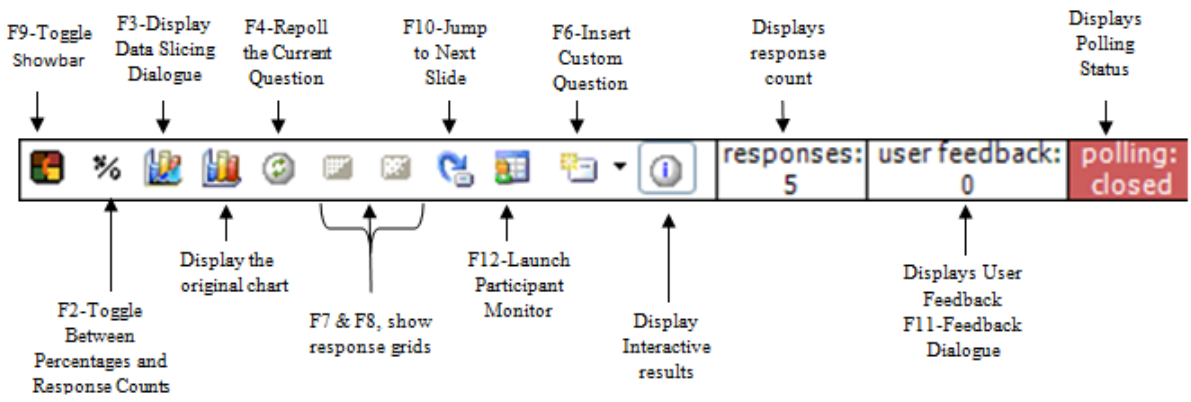
- **Anonymous**: The data collected will not have any identifying information about the respondent.
- **Auto**: The responder card's identification number will be collected with the data.

5. In the **Response Devices** pull-down menu, choose the type of responses you want to receive. *For the loaner set, you will select "Response Devices".*

If you plan to record your lecture in Tegrity, select "Multimedia Enhancement" in the advanced options.

6. Place your presentation in slide-show mode. Move through your presentation as you normally would.

7. When the presentation reaches an interactive TurningPoint slide, the polling will automatically open. A showbar will appear in the upper right corner.



8. When finished with presentation, click on Save Session to save the collected data.

9. ***Remove the receiver from the USB drive. If you have a loaner set, collect response pads from students.***

Congratulations!!! You've completed a TurningPoint presentation.
